

SiteStreamer™ II

Powerful Monitoring at Your Fingertips

INOVONICS PRESENTS

A new generation of SiteStreamers
for remote signal monitoring

The INOmini 645 SiteStreamer II is a Web enabled FM receiver for **remote signal monitoring**. Installed at a broadcast transmitter or any remote location with good reception and an Internet connection, the 645 streams live audio for up to ten listeners.

The browser-accessed Web Interface enables remote tuning and source switching. The StationRotation™ feature permits monitoring of station presets by 'round robin' sequencing of up to 30 stations - each with its specific alarm parameters.

The new 645 FM SiteStreamer II picks-up where its predecessor left-off with a sensitive SDR-based tuner, improved LCD display, high-quality streaming for multiple listeners, improved metering for both off-air and Auxiliary reception, more alarm options, 2 levels of password protection, and much, much more.
